

An abstract geometric design on the left side of the slide. It features a dark blue background with various geometric shapes and patterns. A white circle is positioned near the top left. Below it, a light blue semi-circle is visible. To the right of the semi-circle, there is a pattern of concentric circles. Further down, there are several overlapping squares and triangles in shades of blue, purple, and pink. Some of these shapes contain patterns of concentric lines or dots. A white diagonal line runs from the top left towards the bottom right, separating the abstract design from the text area.

PROJECT PRESENTATION

A decorative graphic on the left side of the slide, composed of several overlapping geometric shapes and patterns. It includes a blue triangle with white concentric circles, a purple triangle with white concentric circles, a pink square with white concentric circles, and a grey square with white concentric circles. A small blue circle is positioned at the intersection of the blue and purple triangles.

BUSINESS PROBLEM OVERVIEW

BUSINESS PROBLEM OVERVIEW

In today's market and its competitive environment , businesses must improve their marketing strategies , this company face a major challenge : How to better understand and engage with its diverse customer population ? , the company wants to uncover the personality traits and purchasing behaviors , by doing this they aim to segment the customer base into meaningful groups , through advanced segmentation (clustering techniques) the company hopes to build a foundation for the sake of engagement and long term customer loyalty

DATA OVERVIEW

- Data types include int64, float64, object, and datetime.
- Income column had 24 missing values (handled by row removal.)
- No duplicate rows found.
- Average Household Income: 52247.25
- we dropped every irrelevant columns which include:
'Dt_Customer','Year_Birth','ID','AcceptedCmp1', 'Z_CostContact',
'Z_Revenue' , and more

DATA OVERVIEW

| index | Missing Before | Missing After |
|---------------------|----------------|---------------|
| AcceptedCmp1 | 0 | 0 |
| AcceptedCmp2 | 0 | 0 |
| AcceptedCmp3 | 0 | 0 |
| AcceptedCmp4 | 0 | 0 |
| AcceptedCmp5 | 0 | 0 |
| Age | 0 | 0 |
| Complain | 0 | 0 |
| Dt_Customer | 0 | 0 |
| Education | 0 | 0 |
| ID | 0 | 0 |
| Income | 24 | 0 |
| Kidhome | 0 | 0 |
| Marital_Status | 0 | 0 |
| MntFishProducts | 0 | 0 |
| MntFruits | 0 | 0 |
| MntGoldProds | 0 | 0 |
| MntMeatProducts | 0 | 0 |
| MntSweetProducts | 0 | 0 |
| MntWines | 0 | 0 |
| NumCatalogPurchases | 0 | 0 |
| NumDealsPurchases | 0 | 0 |
| NumStorePurchases | 0 | 0 |
| NumWebPurchases | 0 | 0 |
| NumWebVisitsMonth | 0 | 0 |
| Recency | 0 | 0 |

1. This figure shows missing data before and after handling

EDA – UNIVARIATE / MULTIVARIATE ANALYSIS

EDA – UNIVARIATE / MULTIVARIATE ANALYSIS

Univariate analysis :

- Kidhome/Teenhome: These features show that a significant portion of customers have no children or teenagers at home, while others have one or two. This can influence spending patterns
- Most spending features are right-skewed, indicating that a large portion of customers spend little to no money on certain product categories, while a smaller group spends significantly. This suggests distinct customer segments based on purchasing habits

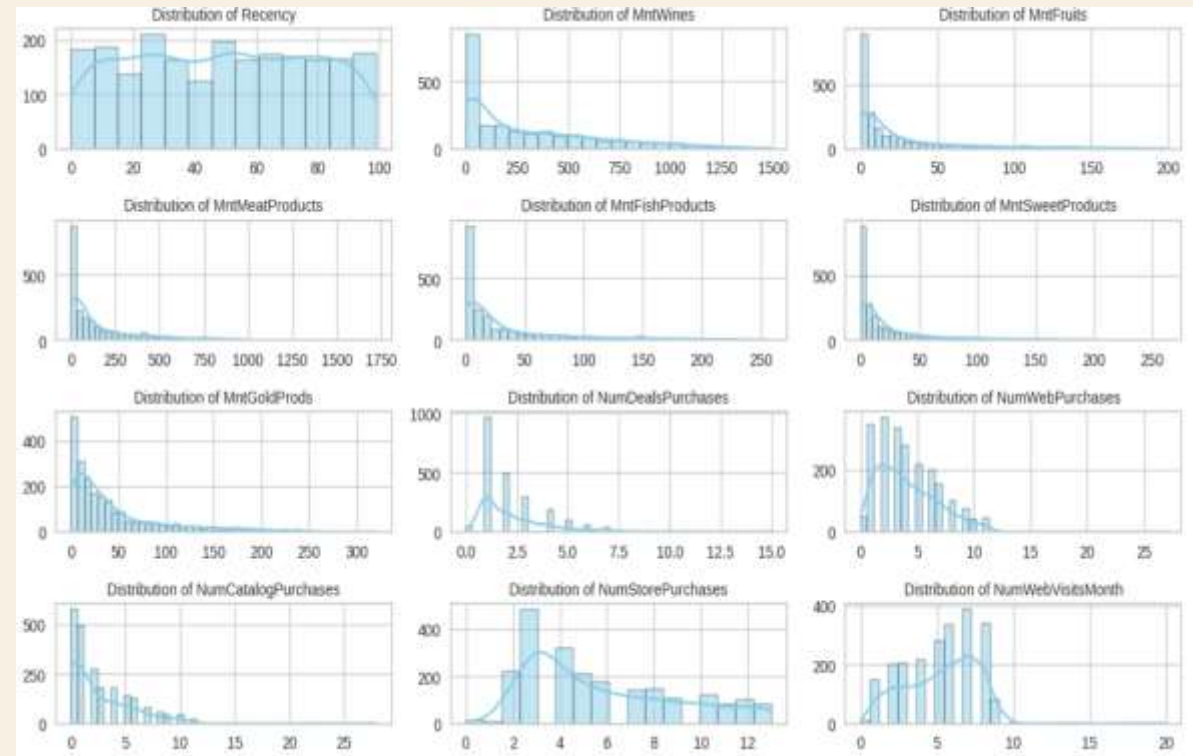

Multivariate/ Bivariate analysis :

- Correlation Heatmap: The heatmap reveals strong positive correlations among the spending features (e.g., MntWines with MntMeatProducts, MntFruits with MntSweetProducts). This suggests that customers who spend on one category tend to spend on others. Income also shows a positive correlation with most spending categories, indicating that higher-income customers tend to spend more.

K MEANS CLUSTERING

| | | |
|------------------------|----------------|--------------------------|
| Number of Clusters: 2 | WCSS: 29127.70 | Silhouette Score: 0.2834 |
| Number of Clusters: 3 | WCSS: 25873.79 | Silhouette Score: 0.2129 |
| Number of Clusters: 4 | WCSS: 23749.54 | Silhouette Score: 0.2227 |
| Number of Clusters: 5 | WCSS: 22862.10 | Silhouette Score: 0.1916 |
| Number of Clusters: 6 | WCSS: 21681.77 | Silhouette Score: 0.1960 |
| Number of Clusters: 7 | WCSS: 20746.06 | Silhouette Score: 0.1395 |
| Number of Clusters: 8 | WCSS: 19996.86 | Silhouette Score: 0.1373 |
| Number of Clusters: 9 | WCSS: 19239.07 | Silhouette Score: 0.1394 |
| Number of Clusters: 10 | WCSS: 18489.21 | Silhouette Score: 0.1472 |

Based on Silhouette Score, the best number of clusters is $k = 2$, anyway There's a moderate "elbow" between $k = 3$ and $k = 5$, we will go with 4 because it have the best Silhouette Score in that range which have total time of 9.4 ms & 9.79 ms wall time

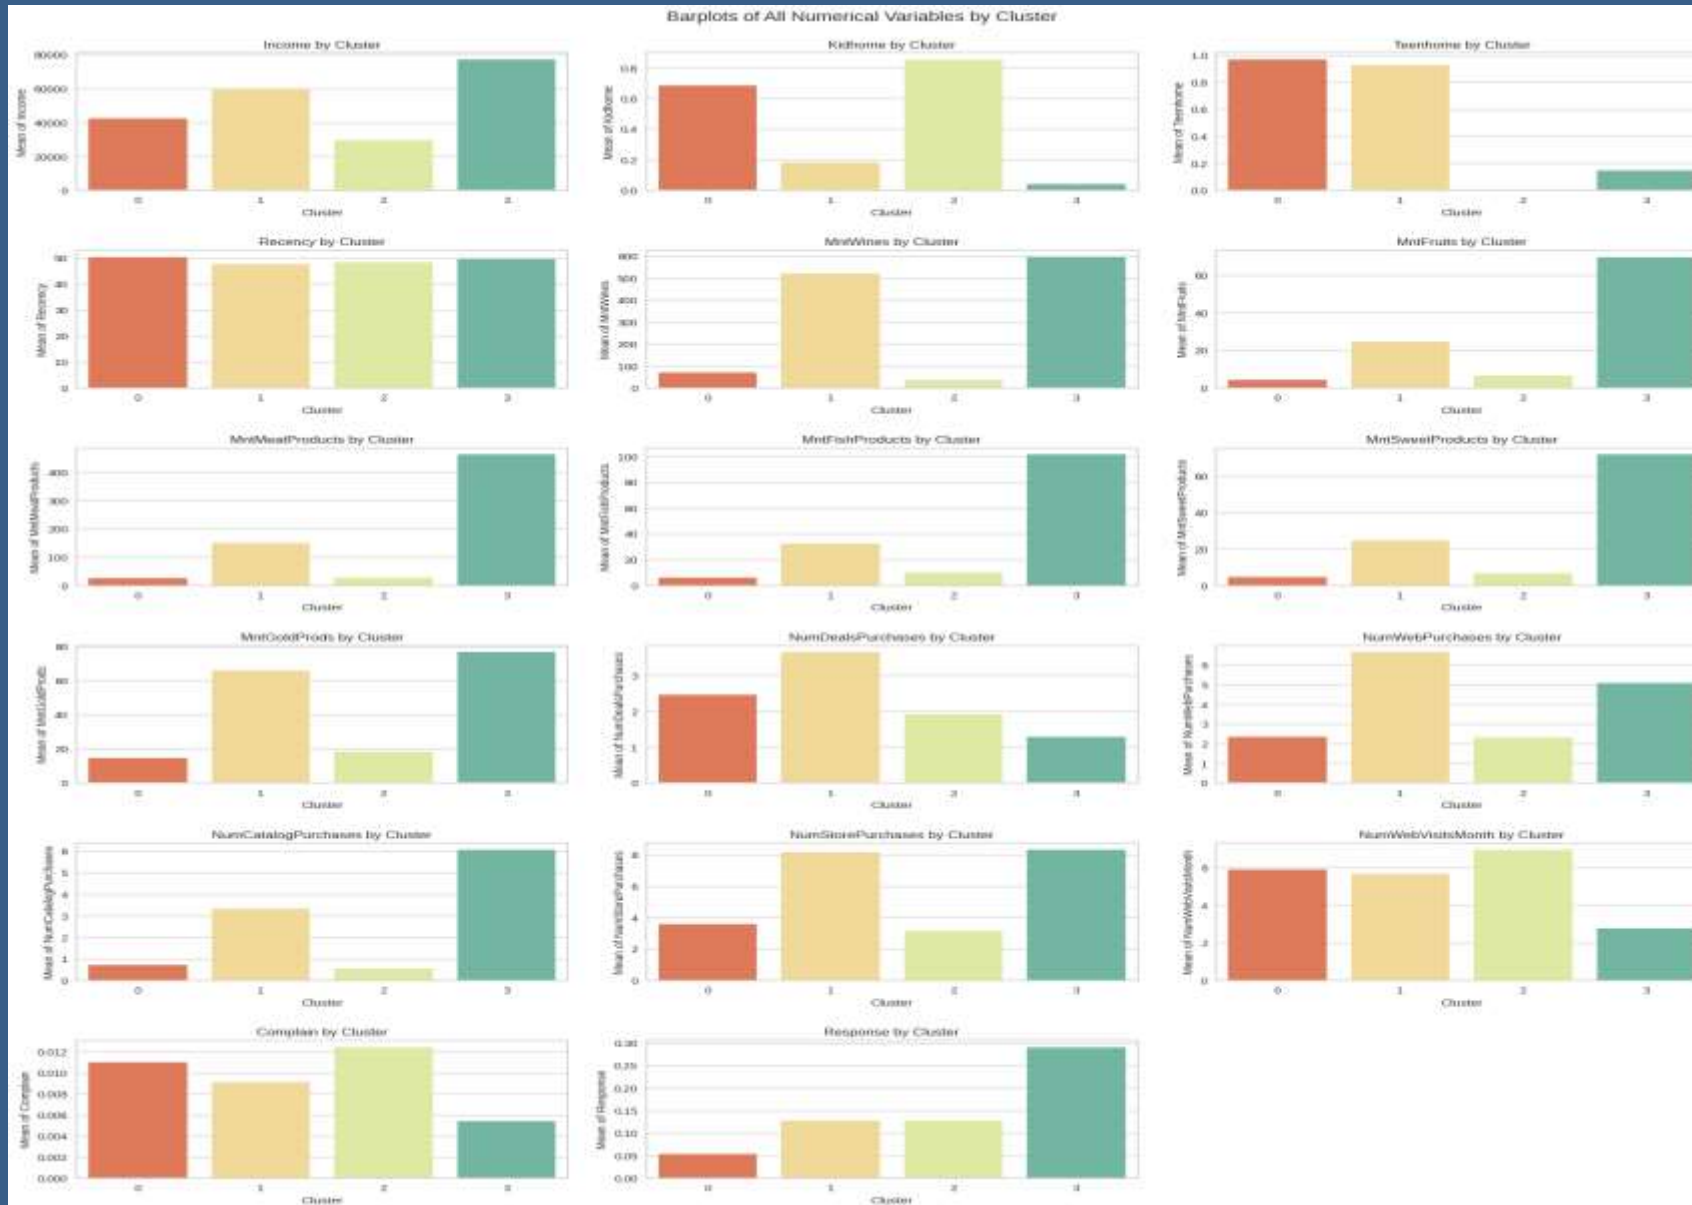

5.Figures show elbow method & Silhouette score

CLUSTER PROFILING AND ANALYSIS

- Cluster 1 has some teen/kids at home more than the others
- Cluster 3 is the ideal customer segment
- Cluster 2 is not very active on website (purchases)

| cluster/ category | Cluster 0 | Cluster 1 | Cluster 2 | Cluster 3 |
|------------------------------|-------------------------|--|------------|-------------------------|
| Income | Low | Moderate | Low to mid | High |
| spending | Minimal across all | Higher than 0 high spending on wines and gold | Medium | High |
| Engage & response | Very low | Engaged more in store purchases | Low | High store/Web activity |
| Recency | Inactive / uninterested | Medium | High | Highest |

CLUSTER PROFILING AND ANALYSIS

6. figure shows all barplots of all numerical variables by cluster

CLUSTER PROFILING ANALYSIS SUMMARY

| Feature | Cluster 0 | Cluster 1 | Cluster 2 | Cluster 3 |
|-------------------|-----------------|-------------|-----------|--------------|
| Income | Low | Medium | Low | Very High |
| Spending | Very Low | Medium-High | Medium | Very High |
| Purchases | Low | Medium | Medium | High |
| Web Visits | Low | Medium | Medium | High |
| Campaign Response | Very Low | Medium | Low | High |
| Recency | High (inactive) | Medium | High | Low (active) |

BUSINESS RECOMMENDATIONS

Cluster 0 “cold leads”

Profile : Low income , low spending , high recency with little interaction

Recommendations :

- ✓ Don't heavily invest here
- ✓ Use low cost mass campaigns

Cluster 1 “Shy engagers”

Profile : Moderate income & spending , more store engagement

Recommendations :

- ✓ Consider cross-channel nurturing
- ✓ Offer product bundles , seasonal discounts

BUSINESS RECOMMENDATIONS

Cluster 2 “**Cation spenders**”

Profile : Lower spending and engagement than Cluster 1 but better than 0

Recommendations :

- ✓ Send reactivation offers if they are inactive

Cluster 3 “**High value customers**”

Profile : very high income & spending , low recency

Recommendations :

- ✓ Treat them as VIPs (premium services , early access, etc.)
- ✓ Create predictive models to suggest products
- ✓ Give them priority in service , inventory , and targeting

BUSINESS RECOMMENDATIONS - GENERAL

- ✓ Focus investments on cluster 3 and nurture cluster 1
- ✓ Reactive cluster 2 cautiously
- ✓ Minimize efforts on cluster 0
